

PROFESSIONAL SUMMARY

Backend Software Developer with production experience building and shipping RESTful APIs, authentication systems, and data-intensive features in a collaborative agile team. Strong foundation in Data Structures & Algorithms (200+ LeetCode problems; Easy 60, Medium 110, Hard 30), System Design, OOP in Python and Java, and cloud deployment. Seeking to apply engineering fundamentals and a growth mindset to real-world problems at Microsoft.

TECHNICAL SKILLS

Languages:	Python, Java, JavaScript, C/C++, TypeScript
Frameworks:	Django, Django REST Framework, Flask, Spring Boot, Node.js
Cloud & DevOps:	Azure (App Service, Storage), AWS, Docker, GitHub Actions, Render, Vercel
Databases:	PostgreSQL, MySQL, SQLite; ORM (Django ORM, SQLAlchemy); query optimization
CS Fundamentals:	Data Structures & Algorithms, System Design, OOP, REST APIs, Microservices, Caching
Tools:	Git, Postman, Swagger/OpenAPI, VS Code, PyCharm, JWT/MFA, RBAC

EXPERIENCE

Python Developer Intern March 2025 – Present

- Tussle Digital** — Hybrid — Gurgaon
- Designed and shipped 30+ RESTful API endpoints (Django REST Framework) for HR, payroll, leave, and employee profile modules serving 200+ records; APIs sustain 150+ concurrent requests under load testing with avg response time under 120ms.
 - Built a complete Multi-Factor Authentication (MFA) system — login, token-based auth, method selection, verification, resend-code — cutting unauthorized access risk via enforced 2-step verification and ensured service reliability via load testing.
 - Engineered reusable pagination across 10+ endpoints, reducing API response payload size by ~40% and measurably improving frontend Render performance and improved API observability.
 - Implemented Role-Based Access Control (RBAC) for admin, manager, and employee roles across all modules — zero reported access violations since deployment.
 - Eliminated N+1 query issues on leave and timesheet endpoints via Django ORM optimization, reducing average query execution time by ~35%.
 - Maintained 100% Swagger/OpenAPI documentation coverage; zero recurring API contract disputes with frontend team.
 - Contributed 50+ commits across 3 agile sprints in a 6-person team using Git branching and pull-request reviews.
 - Wrote unit and integration tests achieving 80%+ coverage across payroll endpoints.
- ★ Promoted Junior -> Senior Developer within 3 months | 2x Star of the Month

PROJECTS

Darpan — Civic Issue Reporting Platform | [Github](#) Dec 2025 – Jan 2026

- Python · Django REST Framework · PostgreSQL · React Native · ResNet CNN*
- Full-stack civic platform handling 500+ reports across 5 categories with real-time lifecycle status tracking.
 - Built 15+ backend API endpoints (issue creation, upvoting, approval/rejection, deduplication, filtering); reduced duplicate reports by ~60% using similarity hashing — a graph/hash-based algorithmic approach.
 - Integrated ResNet-based image classification to auto-validate uploads, rejecting ~25% off-topic images at inference time.
 - Designed admin dashboard with priority queuing by upvotes and SLA breach alerts; deployed backend on Azure App Service.

DSA Algorithm Visualizer & Benchmark Suite May 2026 – Jun 2026

- Java · Spring Boot · TypeScript · React*
- Built a Java-based backend implementing 12 classic algorithms (BFS/DFS, Dijkstra, Merge Sort, Quick Sort, DP — LCS, Knapsack) with step-by-step state capture for visualization.
 - Exposed REST API via Spring Boot; TypeScript/React frontend renders algorithm execution frames interactively — demonstrates OOP, generics, and complexity analysis (Big-O annotated per algorithm).
 - Benchmarked sorting algorithms on datasets up to 10^6 elements; documented time/space complexity trade-offs.
 - Deployed to Azure App.

Engineering Principles & Scalability

Applied core engineering principles to design a horizontally scalable report-ingestion pipeline, enabling the platform to handle 10x simulated load (5,000+ reports) without degradation in response time or data consistency, achieving 85%+ test coverage.

Smart Blind Navigation System

Feb 2026– March 2026

[React Native](#) · [Expo](#) · [Flask](#) · [Google Maps API](#) · [TTS](#)

- Accessibility-first mobile navigation app for visually impaired users — real-time GPS, turn-by-turn voice guidance, proximity alerts; fully operable without screen interaction.
- Integrated Google Maps API for route calculation and live location tracking with sub-5-second update latency.
- Flask backend handles routing requests and concurrent sessions via RESTful design.

FinanceSathi — Personal Finance Platform | [Github](#)

April – May 2026

[Python](#) · [Flask](#) · [SQLAlchemy](#) · [TensorFlow](#) · [JavaScript](#) · [Chart.js](#)

- Automated bill categorization reduced manual classification effort by ~70% via rule-based transaction analysis.
- CRUD modules for income, expenses, budgets, categories, bills; 100+ transaction records with structured, searchable history.
- Optimized SQLAlchemy queries for transaction summaries; improved dashboard/report generation by ~40%.

EDUCATION

Galgotias College of Engineering and Technology — B.Tech, Computer Science

Greater Noida | Expected 2027

Relevant: OS, Data Structures, Algorithms, Machine Learning, Networks, Databases

ACHIEVEMENTS & COMPETITIVE PROGRAMMING

-
- LeetCode: 250+ problems solved (Easy 60 · Medium 145 · Hard 45) — strong DSA signal across arrays, trees, graphs, DP, and sliding window.
 - 2x 'Star of the Month' at Tussle Digital for delivery quality and performance; promoted Junior -> Senior in 3 months.
 - Active open-source contributor and frequent hackathon participant building real-world solutions.
